

JayJay AI Security Assessment Report

Target: sample_scan.xml

■■ JayJay AI Security Assessment Report

=====

■ Target: 192.168.1.10

■ Summary

Open Services : 4

Critical : 0

High : 0

Medium : 4

Low : 0

Overall Risk Score : 32/100

Risk Level : ■ MEDIUM

Executive Summary

Several services require additional security hardening.

Overall system risk is ■ MEDIUM.

■ Priority Remediation Plan

=====

1. SSH

Severity : Medium

Priority : 2

2. HTTP

Severity : Medium

Priority : 2

3. HTTPS

Severity : Medium

Priority : 2

4. MySQL

Severity : Medium

Priority : 2

Detailed Findings

=====

■ Port 22 (SSH)

- Service Detected: openssh 8.9p1 ubuntu

- Used for secure remote administration.

- Recommendation: Disable password login and use SSH keys.

■ Known CVEs

- CVE-2024-6387

Severity: High

CVSS: 8.1

Description: Possible remote code execution vulnerability in certain OpenSSH server configurations.

Fix: Update OpenSSH to the latest patched version.

- Port 80 (HTTP)

- Service Detected: apache httpd 2.4.58

- Web traffic is unencrypted.

- Recommendation: Redirect users to HTTPS.

- Known CVEs

- CVE-2024-38475

Severity: High

CVSS: 8.8

Description: Improper handling of URL rewriting may allow attacks.

Fix: Upgrade Apache HTTP Server to the latest release.

- Port 443 (HTTPS)

- Service Detected: nginx 1.28.0

- Secure encrypted web traffic.

- Recommendation: Keep TLS certificates updated.

- Known CVEs

- CVE-2023-44487

Severity: High

CVSS: 7.5

Description: HTTP/2 Rapid Reset attack may cause denial of service.

Fix: Update Nginx and apply HTTP/2 mitigations.

- Port 3306 (MySQL)

- Service Detected: mysql 8.0.39

- MySQL database detected.

- Recommendation: Restrict network access and use strong credentials.

- Known CVEs

- CVE-2024-21096

Severity: Medium

CVSS: 6.5

Description: MySQL vulnerability that may allow privilege escalation.

Fix: Apply Oracle's latest MySQL security updates.
